

NAME

`ovs-tcpundump` – convert "tcpdump -xx" output to hex strings

SYNOPSIS

`ovs-tcpundump < <file>`

`ovs-tcpundump -h | --help`

`ovs-tcpundump -V | --version`

The **`ovs-tcpundump`** program reads **`tcpdump -xx`** output from stdin, looking for hexadecimal packet data, and dumps each Ethernet as a single hexadecimal string on stdout. This format is suitable for use with the **`ofproto/trace`** command supported by **`ovs-vswitchd(8)`** via **`ovs-appctl(8)`**.

At least two **`-x`** or **`-X`** options must be given, otherwise the output will omit the Ethernet header, which prevents the output from being used with **`ofproto/trace`**.

OPTIONS

- **`-h`** or **`--help`**

Prints a brief help message to the console.

- **`-V`** or **`--version`**

Prints version information to the console.

SEE ALSO

`ovs-appctl(8)`, **`ovs-vswitchd(8)`**, **`ovs-pcap(1)`**, **`tcpdump(8)`**, **`wireshark(8)`**.
