

NAME

`ovs-parse-backtrace` – parses `ovs-appctl` backtrace output

SYNOPSIS

`ovs-appctl backtrace` | `ovs-parse-backtrace` [`<binary>`]

`ovs-parse-backtrace` [`<binary>`] `<backtrace>`

DESCRIPTION

In some configurations, many Open vSwitch daemons can produce a series of backtraces using the **`ovs-appctl backtrace`** command. Users can analyze these backtraces to figure out what the given Open vSwitch daemon may be spending most of its time doing. **`ovs-parse-backtrace`** makes this output easier to interpret.

The **`ovs-appctl backtrace`** output must be supplied on standard input. The binary that produced the output should be supplied as the sole non-option argument. For best results, the binary should have debug symbols.

OPTIONS

- **`--help`**

Prints a usage message and exits.

- **`--version`**

Prints the version and exits.
